

GLOBAL CATCH SHARE FISHERIES

20-25% of global landings by volume and 15-20% by value are managed under catch shares. A catch share program allocates a secure area or privilege to harvest a share of a fishery's total catch to an individual or group. Programs establish appropriate controls on fishing mortality and hold participants accountable. Catch shares can be administered as quota-based programs or area-based programs, which are often called Territorial Use Rights for Fishing (TURFs).

COUNTRIES WITH:

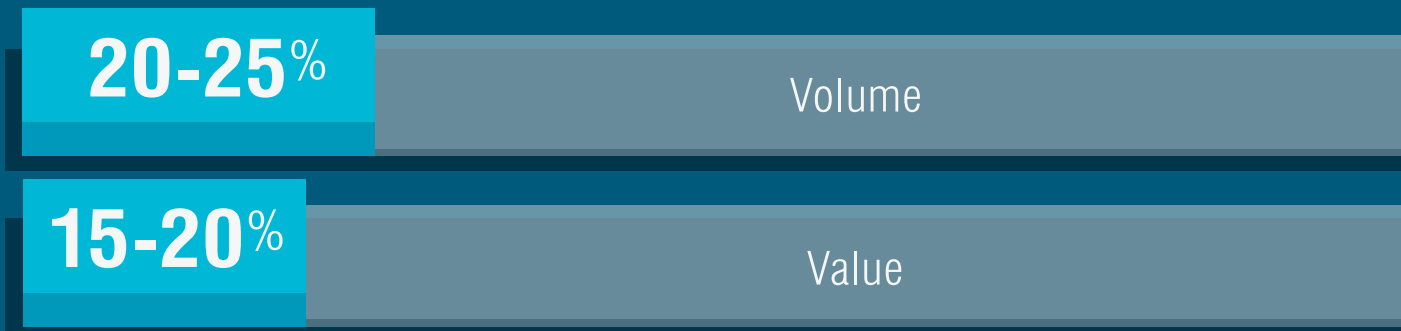

- Quota-Based Catch Shares
- Area-Based Catch Shares
- Both Types
- No Catch Shares

CATCH SHARE FISHERIES:

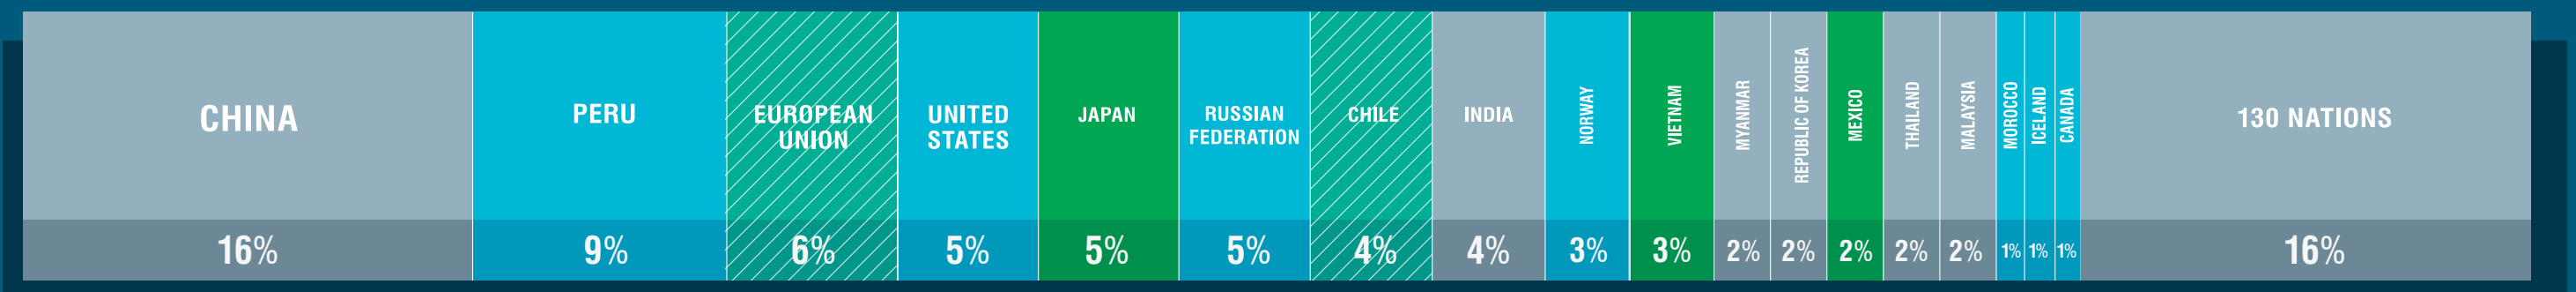

- 195 Number of programs
- 500+ Number of unique species
